

The environment is fast losing her fertility and ability to heal, and plastic pollution is her illness which unfortunately comes directly from some of our own activities.

Prezicon Nigeria kicked off a less plastic campaign in February 2021 throughout all of our onshore and offshore work locations.

Awareness campaigns prepared by our key PREZICON managers were carried out at Prezicon's HQ in Lagos, at NLNG on Bonny island, Bonga FPSO (SNEPCO), AKPO FPSO (TOTAL E&P), EGINA FPSO (TOTAL E&P) as shown in the photos below.

Our main goal is to raise the workers awareness about the plastic pollution impacting on our environment and most especially the aquatic life and the need to avoid wherever possible - single use plastic.

To put to words into actions, Prezicon Management has replaced all single use plastic cups in the offices, we have provided stainless steel food flask and spoons for our NLNG site and Port Harcourt yard workers to stop the use of disposable plastic food cartons and forks and have provided our workers with drinks bottles wherever possible.

In the coming months we intend to widen the campaign beyond our company and into the wider civil society while encouraging other organizations and schools about the increasing dangers of Plastic pollution.
