# INTRODUCING **ALTRAD- MOSTOSTAL** POLAND

The Altrad Group companies operating in Poland are Altrad Poland and Altrad-Mostostal together with the following subsidiaries: Altrad Montaż, Altrad Prymat, Altrad Końskie and Altrad Pomorze.

This year Altrad-Mostostal celebrates its 25th anniversary. Altrad-Mostostal is the largest scaffolding and formwork factory in Poland, and for years we have strengthened our presence both locally and abroad. We have been part of the Altrad Group since 2005.

[www.altrad.com](http://www.altrad.com)

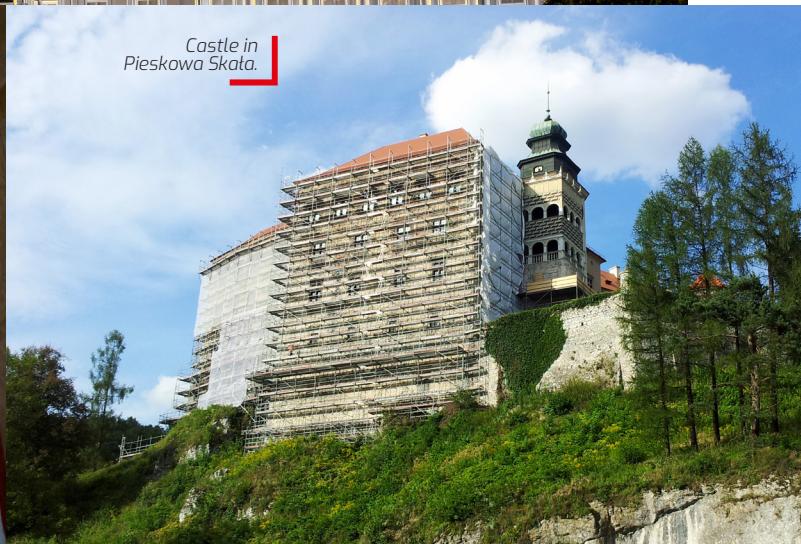

We have designed and implemented, for production and sale, five scaffolding systems. MOSTOSTAL PLUS frame steel scaffolding and ROTAX PLUS modular scaffolding were our first projects. Then we designed MOSTOSTAL PLUS scaffolding in an aluminium version. The interest of customers from Norway, Finland and Sweden contributed to the implementation of ALUROTX modular aluminium scaffolding. We offer customers wall (MIDI BOX) and ceiling formwork systems (ALUSTROP, ALTRADAL – only for the French market). We also produce a roofing system (ALUSKY), a system of stands, construction trestles, rubble chutes, support towers and many more.

Our company is the largest producer of steel and aluminium platforms for all scaffolding systems offered and used in the Altrad Group. We produce over a million of them annually.

We are proud that our products enjoy a high reputation in H&S circles, being both ISO 9001-certified and accredited by the Warsaw Institute of Mechanised Construction and

Rock Mining. Moreover, we have maintained ISO 9001 certification for more than 20 years! A tremendous achievement in the equipment manufacturing industry.

Our advantage compared to other companies is primarily the fact that we do not limit ourselves to the production of only formwork systems or scaffolding. We manufacture equipment necessary at every stage of the investment process, from construction through finishing, maintenance and renovation of buildings. Our products are also used in works in shipyards, power plants, refineries, processing and production plants, and for the construction of stages for various events. We also make designs of atypical and special constructions on request. We have realized (in cooperation with ALTRAD Coffrage & Etalement who coordinated the order) deliveries of the ALUSTROP aluminium formwork system to Cuba, where it was used in the implementation of large industrial projects. Our MIDI BOX wall formwork and ROTAX modular scaffolding have been performing well for some time in Chile.

Andrea Bocelli's  
concert in  
Tallinn, 2019

In 2019, Altrad-Mostostal scaffolding was used during the Andrea Bocelli concert in Tallinn. The company UNITED CAPITAL OÜ – the sales representative of Altrad-Mostostal in Estonia – won the tender for the delivery and assembly of scaffolding elements. The main stage with a roof (with a side height of 18 m and a ridge of almost 25 m), VIP stands and towers for sound and cameras were built. About 11 truckloads of equipment were delivered to implement the project, including Rotax Plus modular scaffolding.

Our products have been used in such projects as the renovation of the University of Lomonosov in Moscow, renovation of a Norwegian drilling platform in a shipyard in Gdańsk, assembly of a flue gas channel in one of the largest Polish heat and power plants in Rybnik, construction of the TRIMARAN yacht, and conservation of numerous monuments (e.g. the Gniezno Cathedral and the Cloth Hall in Krakow).

Annual sales of Altrad-Mostostal in 2019/2020 amounted to PLN 197 776 000 (EUR 44 146 000) and that of the whole Altrad-Mostostal group – PLN 234 585 000 (EUR 52 362 000).

Our four subsidiaries: Altrad Montaż from Siedlce, Altrad Końskie, Altrad Pomorze from Szczecin and Altrad Prymat from Świdnica serve clients in the rental and assembly of our production equipment.

Altrad Montaż was established in 2000. The company offers comprehensive rental and assembly services for Altrad construction equipment. The employees who assemble the scaffolding and formwork have the appropriate qualifications issued by the Accredited Training Centre for Installers. A similar range of services is

also offered by Altrad Końskie from Końskie and Altrad Pomorze. The Altrad Prymat company has been operating since 1992. In addition to scaffolding and formwork rental, the company also provides equipment such as shelves, chairs, safes, and cabinets for enterprises. It comprehensively equips offices, staff and school locker rooms, doctor's offices, state administration offices and others.

Our greatest asset is people: our clients and employees. Altrad-Mostostal employs about 300 people. Most of our team has been with us from the beginning of their professional career.

Altrad-Mostostal is also the patron of the local rugby team, MKS Pogoń Awenta Siedlce. Thanks to courtesy and financial support from Mr Altrad, we were able to organize a new scholarship program for children: "ALTRAD FOR CHILDREN RUGBY SIEDLCE – Sport as equal opportunities for development for every child". As part of the program, we want to support children's sports passion by organizing rugby training and enabling them to participate in various sports events. In addition, we organize a number of other activities, such as language classes, tutoring, psychological support and holiday trips for our pupils.

We strive to establish long-term relationships with our partners in Poland and abroad that allow us to develop together. Thanks to the diversity of recipients and the offered product range, we are able to adapt to the dynamic market situation. We maintain customer satisfaction by providing them with solutions that meet their expectations. We focus on experience, functionality, quick assembly and disassembly, durability and safety. ■
